

NKT and Quant extend Maintenance Partnership to NKT sites in Czech Republic

Stockholm, Sweden – September 10th, 2018 – NKT and Quant have agreed to expand their Multi Site Maintenance Partnership for execution and development of the maintenance function, adding the NKT sites in Velké Meziříčí and Kladno in the Czech Republic.

The objective of this maintenance partnership is to enhance the safety culture, improve equipment reliability and develop one way of working for maintenance, supporting the overall NKT Operating System.

The existing maintenance organisations at the NKT sites will be transferred to Quant; Kladno site planned for August and Velke in September.

Simon Merriman, Cluster Manager Quant Central Europe stated:

"We are proud of the confidence that NKT have shown to us by extending the multi-site partnership for two additional sites "This partnership strengthens our position as a market leader for maintenance services in Northern and Central Europe. NKT ways of working, and their requirements for maintenance fit very well with Quant's value proposition and core processes.

During the past 30 years we have continuously achieved the targets set by our customers and maximized the productivity of their production equipment.

Maintenance is a people-oriented business and our employees are the most important assets for us to succeed in the market. We warmly welcome all our new employees to Quant"
